Yehyeong Park

Corvallis, OR | parkyeh@oregonstate.edu | 302-344-7938 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Data Science student (Life Sciences option) at Oregon State University passionate about using data to analyze environmental and biological systems. Skilled in SQL querying, foundational Python, data collection, and scientific research, with practical experience in sustainable food systems. Bilingual in English and Korean, seeking opportunities to apply quantitative problem-solving and cross-functional communication to real-world challenges.

EDUCATION

Oregon State University Corvallis, OR

Bachelor of Science in Data Science, Life Science Option. *Expected June 2029*

Relevant Coursework: Careers in Data Science (DS 101), Discrete Mathematics (MTH 231), Principles of Biology: Cells (BI 221)

EXPERIENCE

Guest Experience Associate Oct 2026 – Present

Patricia Valian Reser Center for the Creative Arts *Corvallis, OR*

- Delivered guest services at a major performing arts venue, welcoming and assisting a diverse audience of visitors and event attendees.
- Supported event operations by coordinating with team members to ensure smooth, high-quality guest experiences.

Student Worker Sep 2025 – Jun 2026

Oregon State University Dining Services *Corvallis, OR*

- Supported food preparation and service operations in a high-volume university dining environment, consistently upholding food safety standards.
- Delivered customer service to a diverse population of students and campus visitors, maintaining a welcoming and inclusive atmosphere.
- Collaborated with a team to coordinate efficient daily operations and adapt to shifting workloads during peak service periods.

PROJECTS

Sustainable Food Production and Hydroponics Project Oct 2024 – May 2025

Student Researcher

- Designed and built a hydroponic growing system to explore sustainable food production and individual-level approaches to climate action, in association with Kalamalka Secondary School.
- Grew and harvested leafy greens while examining how small-scale food production reduces environmental impacts associated with conventional food systems.
- Synthesized concepts in environmental science, sustainability, hydroponics, and food systems through a hands-on project and public presentation.
